

SCALE REMOVAL AND PREVENTION

Scale Gone

Return Pools to Their Smooth, Clean Appearance

Scrubbing scale off surfaces and equipment isn't easy, and in fact, is time consuming! Instead of laboring for hours with a pool brush or pumice stone, try Scale Gone first.

Scale buildup is a common yet frustrating problem that forms from an imbalance in pool water chemistry, typically due to high pH, alkalinity, or calcium hardness levels. Heated pools, and those that experience evaporation, have a higher likelihood of scale accumulation. Bathers feel scale by the rough texture of calcium deposits on pool walls and floors, and notice mineral deposits on ladders and equipment.

Scale Gone's prized formula breaks down scale and removes it with ease, without adding phosphates to the water. It also inhibits scaling on salt chlorine generators, maintaining the effectiveness of pool equipment. Once scale has been removed, simply dose with Scale Gone to keep it away. The best approach to avoiding scale is regular preventive maintenance.

- **Removes existing scale**
- **Powerful sequestrant prevents scale formation**
- **Does not contribute phosphates**
- **Inhibits scaling on salt chlorine generator cells**
- **Reduces maintenance time**
- **Safe for all pool surfaces**
